

Course Description

AMOS Engineering Order Training

Course Description

This course has been designed to give the participant a full and comprehensive overview of the Engineering Orders program and how this program would be used in combination with View / Edit Modifications. Also, the user will learn how to use the different programs involved and gain practical experience.

Course Objectives

Upon completion of this course, you will be able to:

- ✓ Enter and edit engineering order covers and details
- ✓ Build signoff trees to ensure an efficient maintenance performance
- ✓ Release an engineering order tree to the main modification control program
- ✓ Understand the document flow from “Publication Management” and “Engineering Orders”
- ✓ Configure and manage approval requests for documents

Who should attend

Everybody working with modification documents implementation in AMOS and dealing with the related technical and administrative aspects.
