Swiss-AS Training – Course Description

Modification Control Part 2 – CAMO Training

The modification status for components and aircraft is an essential element of every aircraft operator. ADs, SBs etc. reach us on a regular basis and must be processed promptly. If this is part of my job, then this training is just right for me. After this training I will know how to create, assign and revise documents in AMOS. I will also understand how they get performed on Aircraft or Component.

Course Objectives

Upon completion of this course, you will be able to:

- Enter, define and edit modification documents.
- Define time requirements, effectivities and work templates
- Build "signoff trees" of modification document hierarchy.
- Assign modification documents to the applicable aircraft registrations or components.
- Setup rules to determine if and when a document is applicable for an AC or component
- Track the flow of a modification document implementation through AMOS.
- Extract various modification related reports (e.g., AD status).

Course Topics

- Modification documents setup and management (APN:63)
- Setup of rules within the effectivity (APN:63)
- Revision of Worktemplates (APN:1848)
- Performance of documents within View/Edit Workpackages (APN: 58)
- Reporting Back of Documents (APN:58)
- Creation of multiple Threshold Groups and advanced Time Requirements (APN:63)
- Modification Control Related Reports (APN: 231; APN:639; APN:640)

Who should attend

Everybody working with Modification Documents definition, implementation and management in AMOS.

Prerequisite

Modification Control Part 1 (WBT)
AMOS Basics WBT

Skill

Advanced
